

TUNNEL COVER V3 TEMPLATE

This view is from UNDER THE CAR looking up into the tunnel.
Trace around the template with a white paint marker then cut.

The RED line will be your actual cut on the car. The grey dotted line is where you cut this paper to use as the template! If you also cut the two small circles for the oem hole locations in the paper it allows you to hold the paper template in place with bolts.

Print this page and verify that your printer did not scale the template incorrectly. The 90mm distance above should match your measurement. And the radiuses should match the stock auto hole.
